

CONTROL VALVE SOLUTIONS

VALVE TESTING, MONITORING & OPTIMISATION

TAILOR-MADE SOLUTIONS
FOR ALL CONTROL VALVE
AND RELATED PRODUCTS,
INCLUDING ISOLATION
VALVES, SPECIFICALLY FOR
THE OIL & GAS INDUSTRY.

A WELL-MAINTAINED VALVE WILL BE ABLE TO MEET ITS PERFORMANCE SPECIFICATIONS FOR MANY YEARS. BY CONTRAST A POORLY MAINTAINED VALVE MAY SUFFER FROM REDUCED PERFORMANCE, OR SUFFER A CATASTROPHIC FAILURE.

Comprehensive valve testing is performed in-house at CVS' purpose-built workshop and test facility, with 5 test bays, testing up to 22,500psi. Specialising in fine-tuning control and actuated valve instrumentation, enabling instrumentation enhancement based on the most appropriate and cost-effective options available to CVS as an independent provider.

TESTING

Control valve performance monitoring is a vital component in the management of today's process plants and systems. CVS can now reliably forecast future failures for its clients due to ground-breaking technology. This service is invaluable since outages for overhauls can be scheduled at the most suitable date to minimise downtime.

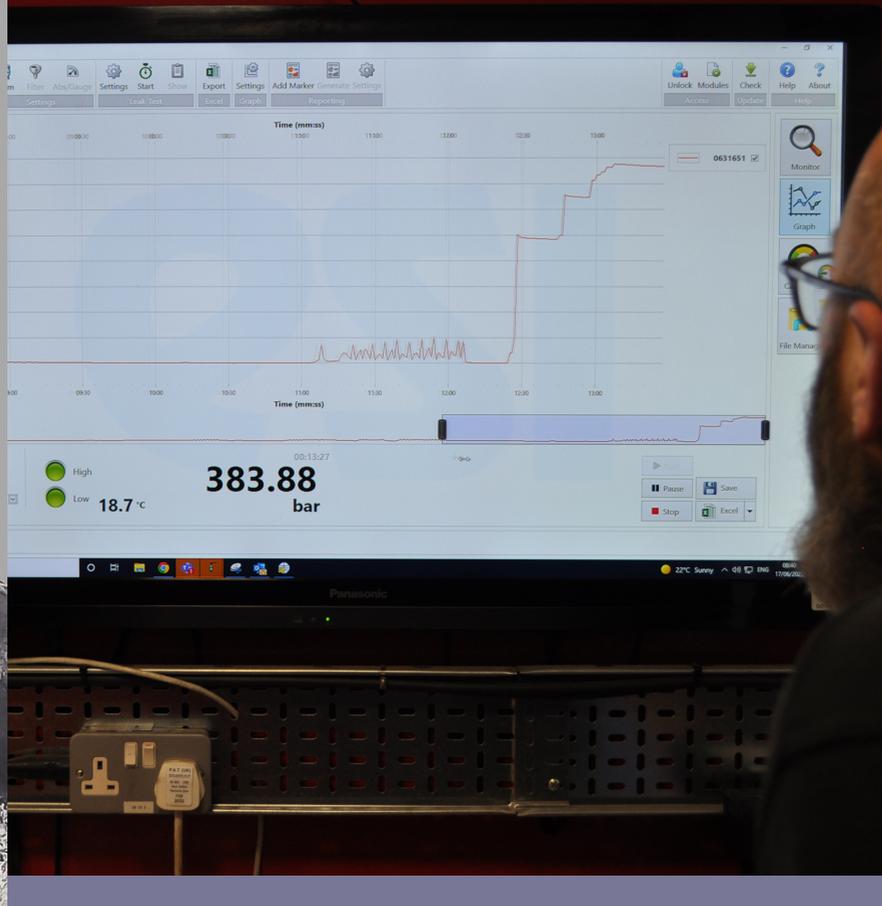

MONITORING

Optimisation of valves, such as seawater ring main, anti-surge valves, and hydro cyclone valves, ensures the client's production efficiency and further reduces unplanned downtime. Instrumentation can be upgraded based on the most relevant and cost-effective product solutions open to CVS as an independent provider.

OPTIMISATION

CVS' VALVE MAINTENANCE SOLUTION IS SCALABLE, WHICH MEANS IT CAN BE USED ON OR OFF-SHORE FOR ANY SIZE OF PLANT.

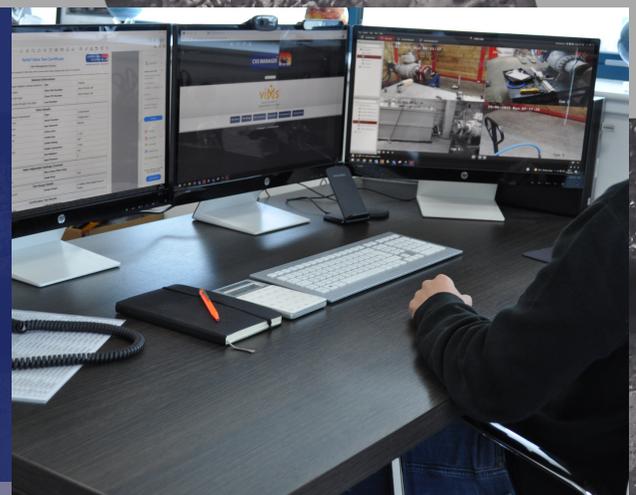

Valve monitoring to achieve peak efficiency ultimately helps to eliminate future failures, resulting in a more cost-effective operation and increased plant availability. Additionally, this has a positive impact on the environment.

PERFORMANCE TUNING

Witness testing can be carried out in person or by using live web feeds to obtain test results through CVS Manager™ either on-site or in CVS' Aberdeen workshop, which can be fully recorded on one of the controllable HD cameras within the testing bays.
